SUMMARY

Full Stack Engineer with 6+ years of experience architecting and shipping production systems using **Django**, **React/TypeScript**, and **Kubernetes**. Currently at HPE delivering enterprise-grade applications with Django REST Framework backends and large-scale React frontends deployed on K8s. Proven track record of translating complex business requirements into scalable, well-tested code that directly reduces operational cost and developer hours.

TECHNICAL SKILLS

Frontend	React 19 , TypeScript 6 , Redux Toolkit, Refine, MUI, Vite, Bun, Playwright, Vitest
Backend	Django 5 , Django REST Framework , Celery, Redis, Channels (WebSocket), FastAPI, Spring Boot 4
Databases	PostgreSQL , Redis, Elasticsearch
Infrastructure	Kubernetes , Helm , Docker , GitLab CI/CD, GitHub Actions, Nginx, Terraform (GCP)
Testing	Playwright E2E, Vitest, Testing Library, pytest, JUnit 5, Testcontainers
Other	Python, Java 21, Biome, Semantic Release, Sentry, MSAL/Azure AD SSO, Git

PROFESSIONAL EXPERIENCE

Software Engineer II

Feb 2026 – Present

Software Engineer III [Juniper Networks](#) → [acquired by HPE](#)

Dec 2022 – Feb 2026

Hewlett Packard Enterprise · Bangalore, India

- **Document Review Tracker (DRT)** — Single-handedly architected a mission-critical document lifecycle app with a **Django 5 / DRF** backend and a **React 19 / TypeScript** frontend, deployed via **Helm on Kubernetes**. Production rollout May 2026.
- Led full platform migration from a **legacy Perl CGI / bare-metal VM** stack to a modern **Django + React + K8s** architecture with **Redis caching and React Query**, eliminating manual deployment processes and enabling continuous delivery.
- Implemented **Celery + Redis** background task processing, Django Channels for real-time WebSocket updates, and **MSAL-based Azure AD SSO** for enterprise-wide authentication.
- Built a full **GitLab CI/CD pipeline** with SAST, dependency scanning, container scanning, secret detection, **Semantic Release** versioning, and automated Helm deployments to K8s staging/production.
- Established **Playwright E2E** test suites with multi-user auth and parallel workers, plus **Vitest + Testing Library** unit tests, ensuring regression-free releases across the platform.
- **DeepThought** — Co-architecting a microservices platform using **Spring Boot 4 / Java 21** with Spring Cloud Gateway, **Drools rules engine**, RabbitMQ event-driven messaging, and a **React 19 / Refine / TanStack Query** frontend. Infrastructure managed with **Docker Compose + Kubernetes**, PostgreSQL, Redis, Elasticsearch, and Nginx.
- Implemented **Spring Security + LDAP** enterprise authentication and **Spring Session + Redis** for distributed session management across microservices.
- Migrated team tooling to **Biome** (Rust-based linter/formatter), achieving **65× formatting speed improvement**.

Full Stack Developer

Jun 2022 – Nov 2022

uKom (Fashinza) · Gurgaon, India

- Overhauled e-commerce frontend with **Next.js and Redux**, achieving a **15% increase in organic traffic** through SSR-based SEO optimizations.
- Integrated **Metabase BI dashboards** directly on production PostgreSQL replicas, improving executive decision-making velocity by **20×**.

Senior Software Developer

Oct 2021 – Jun 2022

Assistant Programmer

Dec 2019 – Oct 2021

Central Board of Secondary Education · Delhi, India

- Architected a **Pension Management System** using **Django** on a bare-metal Linux server, handling multi-level financial workflows and achieving **4× processing efficiency**.

- Automated certificate generation (20 → 200+/day) and built a bulk email system scaling from 500 manual emails to **30,000 programmatic dispatches** — a **1,000× operational improvement**.

Intern

Jun 2017 – Aug 2018

Defence Research and Development Organisation (DRDO) · Delhi, India

- Built ML-based gas sensor classification (E-Nose) using PCA in Python, and implemented noise-removal pipelines using FFT/IFFT algorithms in Python and C.

PROJECTS

India Election Analysis & Prediction Platform [Open Source](#) [electionanalysis.in](#) · [GitHub](#) · Apr 2026

- Shipped a full-stack election analysis platform from **zero to production in 2 weeks** using **Claude Opus 4.6** and a custom **10-agent AI architecture** (architect → analyst → critic → implementer → verifier pipeline). Live at **electionanalysis.in**.
- Stack: **FastAPI + asyncpg + PostgreSQL** backend, **React 19 + Tailwind + Radix UI** frontend, **XGBoost → ONNX** ML prediction pipeline, **Terraform on GCP**, GitHub Actions CI.
- Leveraged 6+ years of **Python, React, and systems architecture** experience to design the full system — data models, ML pipeline, infrastructure, and CI — directing AI agents to generate and iterate on implementation.

EDUCATION

M.Tech, Data Science & Engineering

Oct 2021 – Jul 2025

Birla Institute of Technology and Science, Pilani (WILP)

B.Tech, Computer Science & Engineering

Jul 2015 – Jun 2019

Sam Higginbottom University of Agriculture, Technology and Sciences, Prayagraj
